Serial ATA industry compatibility specifications originate from the Serial ATA International Organization (SATA-IO).. The SATA-IO group collaboratively creates, reviews, ratifies, and publishes the interoperability specifications, the test cases and plugfests.. To ensure backward compatibility with legacy ATA software and applications, SATA uses the same basic ATA and ATAPI command sets as legacy ATA devices.. SATA has replaced parallel ATA in consumer desktop and laptop computers, and has largely replaced PATA in new embedded applications.

Serial ATA (SATA, abbreviated from Serial AT Attachment) is a computer bus interface that connects host bus adapters to mass storage devices such as hard disk drives and optical drives.. Serial ATA succeeded the older Parallel ATA (PATA) standard,[a] offering several advantages over the older interface: reduced cable size and cost (seven conductors instead of 40 or 80), native hot swapping, faster data transfer through higher signalling rates, and more efficient transfer through an (optional) I/O queuing protocol.. Advanced Technology Attachment is the next generation drive interface, following the traditional Parallel ATA.. The Serial ATA Spec includes logic for SATA device hotplugging Devices and motherboards that meet the interoperability specification are capable of hot plugging.. SATA's market share in the desktop PC market was 99% in 2008 PATA remains widely used in industrial and embedded applications that use CompactFlash (CF) storage, which is designed around the legacy PATA standard, even though the new CFAST standard is based on SATA. var q = 'what%20is%20serial%20ata%20iii'; Sep 27, 2015 What is SATA or Serial ATA.. It allows the use of advanced features of SATA such as hotplug and native command queuing (NCQ).. In contrast, parallel ATA (the redesignation for the legacy ATA specifications) used a 16-bit wide data bus with many additional support and control signals, all operating at much lower frequency.. As with many other industry compatibility standards, the SATA content ownership is transferred to other industry bodies: primarily the INCITS T13 subcommittee ATA, the INCITS T10 subcommittee (SCSI), a subgroup of T10 responsible for Serial Attached SCSI (SAS). ae05505a44 [Canopus Nhx E1 Drivers For Mac](#)
